

Panoramic view of west face of Beach Mountain, looking east from hilltop a mile northwest of Yates ranch house (N.5—7.5, Pl. 2). Geologic features of panorama are summarized in diagram below. To south (right) are ledges of Van Horn and Bliss (?) sandstones and El Paso limestones. To north (left), beyond Grapevine fault, is Allamoore formation, folded into a syncline on Tumbledown Mountain. In foreground are resurrected buried hills on pre-Van Horn surface. From field sketches and photographs by P. B. King. pCa—Allamoore formation, with units of limestone (ls), volcanics (v), and phyllite (p); pCh—Hazel formation; pCv—Van Horn sandstone; Ob—Bliss (?) sandstone; Oe—El Paso limestone.
