

THE UNIVERSITY OF TEXAS  
BUREAU OF ECONOMIC GEOLOGY  
AUSTIN, TEXAS

Mimeograph Circular No. 36  
November 1929

The mimeograph circulars issued from the Bureau of Economic Geology contain the record of cores and cuttings from wells received and described in the Bureau. In some instances drillers' logs and other data are given, although it is usually impracticable to include logs of all wells, the logs given being selected as representative of the county or area to which the circular relates. The elevations given are for the most part those reported with the drillers' logs. In some instances the elevation given, as indicated, is that obtained from the location of the well on the topographic map. In all cases the elevation is to be regarded as approximate only.

E. H. Sellards.

SOME WELL RECORDS IN ATASCOSA COUNTY

Peeler No. 1, Texacosa Oil and Gas Co.

Located 2-1/2 mi. north of Campbellton on survey 21-1/2, Atascosa County.

Description of samples by R. T. Short, F. H. Sellards, and T. L. Bailey;  
submitted by A. C. Smith, 1924.

	<u>Depth in feet</u>
Medium-grained, gray, micaceous sand - - - - -	904
Chunks of dark gray nearly noncalcareous silty clay containing numerous concretions of pyrite and strontianite and number of shell fragments and a few complete shells- - - - -	1034
Fairly large lumps of medium gray, noncalcareous, silty clay containing numerous shell fragments - - - - -	1036
Dark gray, noncalcareous, sandy and silty glauconitic clay - -	1072
Cuttings of chiefly glauconite and shell fragments including one piece of indurated greensand- - - - -	1313
Dark gray slightly calcareous clay and very glauconitic clay -	1420

Located 1-1/2 miles northeast of Pleasanton. Elevation between 350 - 3804 feet.

## Description of samples submitted by J. A. Kerr.

	<u>Depth in Feet</u>
Gray sand, containing mostly clear angular grains of quartz from one-half, to one-fourth mm. in diameter - - - - -	3105
Gray slightly micaceous silty clay and calcareous sandstone - - - - -	3100
Silty shale or clay with some calcareous sandstone - - - - -	3147
Dark gray, laminated, non-calcareous shale or clay, containing minute mica scales - - - - -	3170
A concretion of gray micaceous sand cemented with calcareous material - -	3170
Dark gray micaceous silty and sandy shale with some sand - - - - -	3205
Dark gray non-calcareous clay, containing a small amount of polished sand and some pyrite - - - - -	3200
Gray sandy limestone or calcareous sandstone - - - - -	3315
Grayish, yellow and dark gray impure limestone containing some rounded sand grains and almost black grains of glauconite - - - - -	3280
Whitish gray limestone with irregular clear areas of a greenish yellow color in a fine grained ground mass, effervescing slowly in cold dilute hydrochloric acid - - - - -	3290
Gray sandy slightly micaceous clay - - - - -	3310
Carbonaceous gray sandy and silty clay - - - - -	3330
Dark gray carbonaceous silty or sandy clay - - - - -	3330
Greenish gray glauconitic sandy clay - - - - -	3350
Greenish gray clay - - - - -	Depth unknown
Dark gray fine grained shale containing oaly shreds, some gray calcareous sand sandstone, and some pyrite - - - - -	3380
Very dark gray fine grained slightly silty and slightly micaceous shale of even texture - - - - -	3370
Dark gray silty shale and gray argillaceous sandstone, both minutely micaceous and containing small green grains, possibly glauconite - -	3380
Gray sandy shale and argillaceous sandstone containing some glauconite grains -	3415
Gray arenaceous and micaceous shale, argillaceous sandstone having in part a pyritiferous cement, and some glauconite and limestone - - - -	3435
Gray sandy micaceous shale, argillaceous sandstone, some gray fine grained limestone, pyrite, and glauconite - - - - -	3448

	<u>Depth in Feet</u>
Gray very fine clay, some pyrite, and minute sand grains - - - - -	3448
Gray fine silty clay - - - - -	3460
Dark gray minutely silty clay - - - - -	3460
Gray fine grained shale containing pyrite, biotite, mica, glauconite, and some argillaceous sandstone which contains calcareous matter - -	3470
Dark gray very fine clay - - - - -	3470
Gray fine grained shale and light gray sandstone containing minute specks of glauconite and calcareous material, both minutely micaceous and containing pyrite and black specks - - - - -	3500
Dark bluish gray clay shale, <i>Cristellaria</i> cf. <i>limbata</i> and other foraminifera noted - - - - -	3550
Dark bluish gray shale containing some sand grains - - - - -	3570
Dark gray clay shale, slightly calcareous - - - - -	3600
Thinly laminated fine grained gray shale containing abundant foraminiferal remains - - - - -	3770
Finely laminated and fine grained black shale containing abundant foraminiferal remains - - - - -	3780
Fine grained black shale containing slightly rounded quartz grains and foraminifera - - - - -	3790
Dark gray slightly calcareous clay - - - - -	3810
Gray marl. Typical Cretaceous foraminifera present - - - - -	3840
Gray slightly silty shale, gray calcareous sandstone containing pyrite and glauconite, and some clay-iron-stone and polished sand - - -	3935
Gray slightly calcareous and slightly silty minutely micaceous shale, gray calcareous sandstone containing pyrite, glauconite, and mica, some polished sand, and a few grains of clay-iron-stone - - -	3945
Calcareous gray shale containing minute mica scales, gray calcareous minutely micaceous sandstone containing pyrite, glauconite, and minute mica scales and some polished sand and clay-iron-stone - -	3965
Very fine gray marl, minute pyrite concretions, and some rice sand - - -	3975
Gray very fine marl containing some minute pyrite concretions and fine sand and a few fragments of glauconite. A few specimens each of a number of foraminifera were noted - - - - -	4006

Note: This well said by the owners, to have reached a depth of 4015 feet and to have been there discontinued owing to an accident pipe.
